SERVICE INFORMATION

Your New Radio Remote Control System

Thank you for your purchase of Magnetek’s Flex EX2 Radio Remote Equipment Control. Magnetek has set a whole new standard in radio remote performance, dependability, and value with this unique new line of handheld transmitters.

If your product ever needs modification or service, please contact one of our representatives at the following locations:

All rights reserved. This notice applies to all copyrighted materials included with this product, including, but not limited to, this manual and software embodied within the product. This manual is intended for the sole use of the person(s) to whom it was provided, and any unauthorized distribution of the manual or dispersal of its contents is strictly forbidden. This manual may not be reproduced in whole or in part by any means whatsoever without the expressed written permission of MAGNETEK.
PRODUCT MANUAL SAFETY INFORMATION

Magnetek, Inc. (Magnetek) offers a broad range of radio remote control products, control products and adjustable frequency drives, and industrial braking systems for overhead material handling applications. This manual has been prepared by Magnetek to provide information and recommendations for the installation, use, operation and service of Magnetek’s material handling products and systems (Magnetek Products). Anyone who uses, operates, maintains, services, installs or owns Magnetek Products should know, understand and follow the instructions and safety recommendations in this manual for Magnetek Products.

The recommendations in this manual do not take precedence over any of the following requirements relating to cranes, hoists and lifting devices:

- Instructions, manuals and safety warnings of the manufacturers of the equipment where the radio system is used,
- Plant safety rules and procedures of the employers and the owners of facilities where the Magnetek Products are being used,
- Regulations issued by the Occupational Health and Safety Administration (OSHA),
- Applicable local, state or federal codes, ordinances, standards and requirements, or
- Safety standards and practices for the overhead material handling industry.

This manual does not include or address the specific instructions and safety warnings of these manufacturers or any of the other requirements listed above. It is the responsibility of the owners, users and operators of the Magnetek Products to know, understand and follow all of these requirements. It is the responsibility of the owner of the Magnetek Products to make its employees aware of all of the above listed requirements and to make certain that all operators are properly trained. No one should use Magnetek Products prior to becoming familiar with and being trained in these requirements.

WARRANTY INFORMATION

FOR INFORMATION ON MAGNETEK’S PRODUCT WARRANTIES BY PRODUCT TYPE, PLEASE VISIT WWW.MAGNETEK.COM.
1 Introduction

The Flex EX2 radio remote control systems are designed for control of industrial equipment and machinery such as overhead traveling cranes, jib cranes, gantry cranes, tower cranes, electric hoists, winches, monorails, conveyor belts, mining equipment and all other material handling equipment where wireless control is preferred.

Each Flex EX2 system consists of a transmitter handset and a receiver unit. Other standard-equipped accessories include transmitter waist belt, vinyl pouch, pushbutton labels, LED labels, output cable and instruction manual CD.

List of notable features includes:

- **Advanced Controls** – the system utilizes dual advanced microprocessor controls with 32-bit CRC and Hamming Code, providing ultra-fast, safe, precise, and error-free encoding and decoding.
- **Frequency Hopping RF Transceiver** – the system automatically searches and locks onto a free and uninterrupted channel at every system startup or during operation when encountering radio interference. The system is also capable of two-way communication between the transmitter and receiver as well as receiver-to-receiver with system status and relay output feedbacks.
- **Zero-G Sensor Embedded** – the transmitter is embedded with a Zero-G sensor to guard against any unintended control of the crane or equipment when transmitter is thrown or dropped.
- **Wireless Remote Pairing Function** – system information can be transferred wirelessly between two transmitters or between a transmitter and a receiver without the hassle of resetting the spares.
- **Reliable Pushbuttons** – the pushbuttons have gold-plated contacts and are rated for more than 2 million press cycles. The defined snap-action steps provide positive tactile feedback even through gloves.
- **Low Power Consumption** – requires only two “AA” alkaline batteries for more than 100 hours of uninterrupted operation between replacements.
- **Durable Nylon and Fiberglass Composite Enclosures** – highly resistant to breakage and deformation even in the most abusive environments. The receiver enclosures and output cables are UL94-V0 rated. The transmitter and receiver enclosures are IP66 rated.
- **Full Compliance** – all systems fully comply with the FCC Part: 15 Rules and European Safety Standards.
- **Other Optional Accessories and Features** – transmitter magnet mount, transmitter belt clip, transmitter lanyard, transmitter rubber guard, miniature indicator light and buzzer, charging station, external antenna kit, multiple receivers function, and many others.
2 Radio Controlled Safety

WARNINGS and CAUTIONS

Throughout this document WARNING and CAUTION statements have been deliberately placed to highlight items critical to the protection of personnel and equipment.

WARNING

WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION

CAUTION indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTE:  A NOTE statement is used to notify people of installation, operation, programming, or maintenance information that is important, but not hazard-related.

WARNINGS and CAUTIONS SHOULD NEVER BE DISREGARDED.

The safety rules in this section are not intended to replace any rules or regulations of any applicable local, state, or federal governing organizations. Always follow your local lockout and tagout procedure when maintaining any radio equipment. The following information is intended to be used in conjunction with other rules or regulations already in existence. It is important to read all of the safety information contained in this section before installing or operating the Radio Control System.
2.1 Critical Installation Considerations

![WARNING]

Prior to installation and operation of this equipment, read and develop an understanding of the contents of this manual and the operation manual of the equipment or device to which this equipment will be interfaced. Failure to follow this warning could result in serious injury or death and damage to equipment.

All equipment must have a mainline contactor installed and all tracked cranes, hoists, lifting devices and similar equipment must have a brake installed. Failure to follow this warning could result in serious injury or death and damage to equipment.

An audible and/or visual warning means must be provided on all remote controlled equipment as required by code, regulation, or industry standard. These audible and/or visual warning devices must meet all governmental requirements. Failure to follow this warning could result in serious injury or death and damage to equipment.

Follow your local lockout tagout procedure before maintaining any remote controlled equipment. Always remove all electrical power from the crane, hoist, lifting device or similar equipment before attempting any installation procedures. De-energize and tagout all sources of electrical power before touch-testing any equipment. Failure to follow this warning could result in serious injury or death and damage to equipment.

The direct outputs of this product are not designed to interface directly to two state safety critical maintained functions, i.e., magnets, vacuum lifts, pumps, emergency equipment, etc. A mechanically locking intermediate relay system with separate power considerations must be provided. Failure to follow this warning could result in serious injury or death or damage to equipment.

2.2 General

Radio controlled material handling equipment operates in several directions. Cranes, hoists, lifting devices and other material handling equipment can be large, and can operate at high speeds. The equipment is often operated in areas where people are working in close proximity to the material handling equipment. **The operator must exercise extreme caution at all times.** Workers must constantly be alert to avoid accidents. The following recommendations have been included to indicate how careful and thoughtful actions may prevent injuries, prevent damage to equipment, or even save a life.

2.3 Persons Authorized to Operate Radio Controlled Cranes

Only properly trained persons designated by management should be permitted to operate radio controlled equipment.

Radio controlled cranes, hoists, lifting devices and other material handling equipment should not be operated by any person who cannot read or understand signs, notices and operating instructions that pertain to the equipment.
Radio controlled equipment should not be operated by any person with insufficient eyesight or hearing or by any person who may be suffering from a disorder or illness that may cause them to lose control of the equipment, is taking any medication that may cause loss of equipment control, or is under the influence of alcohol or drugs.

### 2.4 Safety Information and Recommended Training for Radio Controlled Equipment Operators

Anyone being trained to operate radio controlled equipment should possess as a minimum the following knowledge and skills before using the radio controlled equipment.

**The operator should:**
- have knowledge of hazards pertaining to equipment operation
- have knowledge of safety rules for radio controlled equipment
- have the ability to judge distance of moving objects
- know how to properly test prior to operation
- be trained in the safe operation of the radio transmitter as it pertains to the crane, hoist, lifting device or other material handling equipment being operated
- have knowledge of the use of equipment warning lights and alarms
- have knowledge of the proper storage space for a radio control transmitter when not in use
- be trained in transferring a radio control transmitter to another person
- be trained how and when to report unsafe or unusual operating conditions
- test the transmitter emergency stop and all warning devices prior to operation; testing should be done on each shift, without a load
- be thoroughly trained and knowledgeable in proper and safe operation of the crane, hoist, lifting device, or other material handling equipment that utilizes the radio control
- know how to keep the operator and other people clear of lifted loads and to avoid “pinch” points
- continuously watch and monitor status of lifted loads
- know and follow cable and hook inspection procedures
- know and follow the local lockout and tagout procedures when servicing radio controlled equipment
- know and follow all applicable operating and maintenance manuals, safety procedures, regulatory requirements, and industry standards and codes

**The operator shall not:**
- lift or move more than the rated load
- operate the material handling equipment if the direction of travel or function engaged does not agree with what is indicated on the controller
- use the crane, hoist or lifting device to lift, support or transport people
- lift or carry any loads over people
- operate the crane, hoist or lifting device unless all persons, including the operator, are and remain clear of the supported load and any potential pinch points
- operate a crane, hoist or lifting device when the device is not centered over the load
- operate a crane, hoist or lifting device if the chain or wire rope is not seated properly in the sprockets, drum or sheave
- operate any damaged or malfunctioning crane, hoist, lifting device or other material handling equipment
- change any settings or controls without authorization and proper training
- remove or obscure any warning or safety labels or tags
- leave any load unattended while lifted
- leave power on the radio controlled equipment when the equipment is not in operation
• operate any material handling equipment using a damaged controller because the unit may be unsafe
• operate manual motions with other than manual power
• operate radio controlled equipment when low battery indicator is on

2.5 Transmitter Unit

Transmitter switches should never be mechanically blocked on or off. When not in use, the operator should turn the transmitter off. A secure storage space should be provided for the transmitter unit, and the transmitter unit should always be placed there when not in use. This precaution will help prevent unauthorized people from operating the material handling equipment.

Spare transmitters should be stored in a secure storage space and only removed from the storage space after the current transmitter in use has been turned off, taken out of the service area and secured.

2.6 Pre-Operation Test

At the start of each work shift, or when a new operator takes control of the crane, operators should perform, at a minimum, the following steps before making lifts with any crane or hoist:

Test all warning devices.
Test all direction and speed controls.
Test the transmitter emergency stop.

2.7 Batteries

WARNING

Know and follow proper battery handling, charging and disposal procedures. Improper battery procedures can cause batteries to explode or do other serious damage. Failure to follow this warning could result in serious injury or death and damage to equipment.
3 General System Information

4. Function Dipswitches
5. Channel Dipswitch
6. Programming Port
7. Power Transformer
8. Lower Relay Board
9. Upper Relay Board
4 Function Settings

4.1 Transmitter

4.1.1 Transmitter Firmware Version

1. Rotate the power switch key to OFF (0) position.
2. With the STOP button elevated, press and hold PB1 and PB3 at the same time.
3. Rotate the power switch key to ON (1) position.
4. Release PB1 and PB3 at the same time. The Status LED displays firmware version with red, green and orange blinks.
5. Exit Firmware Version mode by rotating the power switch key to OFF (0) position.

4.1.2 Transmitter Channel Settings

A. Unassigned Channel Scheme (no preset system channel)

When both transmitter and receiver are set to unassigned channel scheme (no preset channel), the system automatically searches and locks onto a free and uninterrupted channel at every transmitter startup.

1. Rotate the power switch key to OFF (0) position.
2. With the STOP button elevated, press and hold PB1 and PB2 at the same time.
3. Rotate the power switch key to ON (1) position.
4. Release PB1 and PB2 at the same time. The system will enter Channel Setting mode. The Status LED displays current channel setting with red and green blinks. A green blink represents the tens (+10) and a red blink represents the units (+1). For example, 1 green blink followed by 5 red blinks is channel 15. If the transmitter has been configured for the “unassigned channel” the Status LED will be solid orange.
5. Change transmitter channel to “channel unassigned” by pressing PB4 one time (Status LED displays solid orange). Make sure the Status LED shows solid orange before proceeding to the next step.
6. Transfer “channel unassigned” setting to the receiver by rotating and holding the power switch key at START position until the Status LED turns to solid green (transfer complete). Turn off the transmitter power if solid green is not shown on the Status LED after more than 10 seconds (transfer incomplete); the transmitter will revert back to its previous channel setting. Make sure the receiver power is turned on and the receiver is within the operating distance during the entire process. When transmitter is set to “channel unassigned” the receiver must also set to “channel unassigned” in order for the entire system to work.
7. Exit Channel Setting mode by rotating the power switch key to OFF (0) position.
B. Assigned Channel Scheme (preset system channel)

Both transmitter and receiver are assigned with a matching preset channel (channel 01 - 62).

1. Rotate the power switch key to OFF (0) position.
2. With the STOP button elevated, press and hold PB1 and PB2 at the same time.
3. Rotate the power switch key to ON (1) position.
4. Release PB1 and PB2 at the same time. The system will enter Channel Setting mode. The Status LED displays current channel setting with red and green blinks. A green blink represents the tens (+10) and a red blink represents the units (+1). For example, 1 green blink followed by 5 red blinks is channel 15. If the transmitter has been configured for the “unassigned channel” the Status LED will be a solid orange.
5. Change transmitter channel by pressing PB1 to increment the units (+1) and PB2 to increment the tens (+10). For example, press PB2 two times and then PB1 four times for channel 24 (Status LED blinks 2 greens and 4 reds). Make sure the newly selected channel appears on the Status LED before proceeding to the next step.
6. Transfer the newly selected channel to the receiver by rotating and holding the power switch key at START position until the Status LED turns to solid green (transfer complete). Turn off the transmitter power if solid green is not shown on the Status LED after more than 10 seconds (transfer incomplete); the transmitter will revert back to its previous channel setting. Make sure the receiver power is turned on and the receiver is within the operating distance during the entire process. **Skip step 6 if changing receiver channel is not required.**
7. Exit Channel Setting mode by rotating the power switch key to OFF (0) position.

**NOTE:** When selecting a new channel, make sure each button press does not exceed 3 seconds.

**Important Note:**
Step 6 illustrated above is strictly required if you are intending to change the entire system channel (both transmitter and receiver). The entire system will no longer work if step 6 is skipped because the transmitter and receiver channels are now different (new vs. old). In this case you would have to redo steps 1-4 and step 6 to transfer the newly selected transmitter channel to the receiver.
4.1.3 Remote Pairing

A. Transmitter-to-Transmitter Pairing:

1. Rotate the power switch key to OFF (0) position.
2. With the STOP button elevated, press and hold PB1 and PB3 at the same time.
3. Rotate the power switch key to ON (1) position.
4. Release PB1 and PB3 at the same time. The system will enter Remote Pairing mode. The Status LED displays firmware version with red, green and orange blinks.
5. Output data (original transmitter) by pressing and holding PB2 (Status LED off).
6. Receive data (new transmitter) by pressing and holding PB1 (Status LED blinks green).
7. When the Status LED (receiving data end) turns to solid green while both pushbuttons are still pressed down, the pairing is completed.
8. Exit Remote Pairing mode by rotating the power switch key to OFF (0) position.

NOTE: During remote pairing make sure the distance between the two transmitters is no more than 1 meter.
B. Receiver-to-Transmitter Pairing:

S2 dipswitch position 10 set to “0” (down): After the transmitter enters the Remote Pairing mode, output receiver data by pressing and holding the PAIRING button located on the receiver cover and receive data by pressing and holding PB3 on the transmitter, both at the same time. When the transmitter Status LED turns to solid green while both pushbuttons are still pressed down, the pairing is completed.

S2 dipswitch position 10 set to “1” (up): After the transmitter enters the Remote Pairing mode, press and hold PB3 on the transmitter until the Status LED turns to solid green, indicating the pairing is complete. Make sure the transmitter and receiver are within 10 meters from one another and that no other active receivers are nearby during the pairing process. During pairing process the receiver MAIN relays must be deactivated (relay open).

c. Transmitter-to-Receiver Pairing:

S2 dipswitch position 10 set to “0” (down): After the transmitter enters the Remote Pairing mode, output transmitter data by pressing and holding PB4 on the transmitter and receive data by pressing and holding the PAIRING button on the receiver cover, both at the same time. When the transmitter Status LED turns to solid green while both pushbuttons are still pressed down, the pairing is completed.

4.1.4 Transmitter Start Function Settings

When transmitter goes into sleep mode the system is temporarily deactivated (MAIN relays opened). Execute the START command or press any pushbutton to wake up the system (MAIN relays closed).

4.1.7 Infrared Programming

Other custom functions and settings not listed in this manual can be programmed via the infrared IR programmer unit, such as the system serial number, frequency range, relay output status feedback, new and updated functions, and many others. Please contact Magnetek field service for more details.

4.1.8 Pushbutton Function Settings

1. Rotate the power switch key to OFF ( 0 ) position.
2. With the STOP button elevated, press and hold PB3 and PB4 at the same time.
3. Rotate the power switch key to ON ( 1 ) position.
4. Release PB3 and PB4 at the same time. The system will enter Pushbutton Function mode.
5. The Status LED displays current pushbutton function setting with orange, green and red blinks. An orange blink represents the hundreds (+100), a green blink represents the tens (+010), a red blink represents the units (+001), and solid orange represents no function (000). For example, 1 orange blink followed by 2 green blinks and 5 red blinks is pushbutton function no. 125. Pushbutton function number with “0” is represented by no orange, green or red blink. For example, 1 orange blink followed by 5 red blinks is pushbutton function no. 105.

6. Set pushbutton function number by pressing PB3 to increment the hundreds (+100), PB2 to increment the tens (+010), PB1 to increment the units (+001), and PB4 to reset (000 - solid orange). For example, press PB3 one time, PB2 four times, and PB1 six times for pushbutton function no. 146 (Status LED blinks 1 orange, 4 greens and 6 reds).

7. Exit Pushbutton Function mode by rotating the power switch key to OFF (0) position.

4.1.8.1 Toggled Pushbutton with LED Indication – Standard Right/Left Pushbutton Configuration

Set pushbutton toggled function (latching output relay) with LED indications. LED 1 - 4 shown inside the shaded box illustrates which LED on the transmitter lights up when the designated pushbutton is pressed.

* PB1...PB4 → Pushbutton number.
* Normal → Normal momentary contact.
* LED 1 - LED 4 → Pushbutton toggled function with designated LED indication.
6EX2:

4.1.9 Display Frequency Band

1. Rotate the power switch key to OFF (0) position.
2. With the STOP button elevated, press and hold PB2 and PB4 at the same time.
3. Rotate the power switch key to ON (1) position.
4. Release PB2 and PB4 at the same time. The system will enter Frequency Band Display mode.
5. The Status LED displays the preset transmitter frequency band with orange, green and red blinks. An orange blink represents the hundreds (+100), a green blink represents the tens (+010) and a red blink represents the units (+001). For example, 8 orange blinks followed by 6 green blinks and 3 red blinks is 863 MHz.
6. Exit Frequency Band Display mode by rotating the power switch key to OFF (0) position.

4.1.10 Output Feedback Settings

Up to 4 assignable relay outputs can be programmed into the system and feedback to the transmitter LED indicators during operation. These settings require using the infrared IR programmer unit. Please contact Magnetek field service for more details.

4.1.11 Infrared Function Settings

The transmitter is embedded with infrared sensors for infrared start function. These settings require using the infrared IR programmer unit. Please contact Magnetek field service for more details.

4.1.12 Zero-G Sensor Settings

The transmitter is embedded with a Zero-G sensor to guard against any unintended control of the crane or equipment when transmitter is thrown or dropped. When triggered, the receiver MAIN relays are deactivated with the exception of the horn output that can be assigned to any Function output relay (K10). This horn output setting requires the infrared IR programmer unit. Please contact Magnetek field service for more details.

4.2 Receiver

4.2.1 Receiver Channel Settings

Set the receiver channel by configuring the S3 channel dipswitch located on the RF/decoder board. Only the first 6 dip positions are used for channel programming. The system channels table in Section 4.2.6 on page 33 illustrates which dipswitch setting corresponds to which channel. Once the receiver channel is altered, make sure to change the transmitter channel as well. The channel on both transmitter and receiver must be identical in order for the system to work (see Section 4.1.2 on page 18, part B). When set to all zeros (000000), the receiver becomes unassigned channel scheme (see Section 4.1.2 on page 18, part A).

Example:

The above dipswitch setting “1 0 0 1 0 0” corresponds to “channel 36” in the system channels table in Section 4.2.6 on page 33.
### 4.2.2 Output Relay Configurations

#### 4.2.2.1 Output Relay Types

1. **2 output relays per motion – single speed only**
   
   Output relays with Forward (F) and Reverse (R) 1st speed only.

   ![Diagram of 2 relays]

2. **3 output relays per motion – shared 2nd speed output relay**
   
   Output relays with Forward 1st speed (F1), Reverse 1st speed (R1) and Forward/Reverse 2nd speed (F/R2). Forward and Reverse 2nd speed (F/R2) shared the same output relay.

   ![Diagram of 3 relays]

#### 4.2.2.2 Output Relay Actions at 2nd Speed

3 output relays configuration with Closed/Closed contact at 2nd speed

   F1 (or R1) output relay closed at 1st speed and F1 + F/R2 (or R1 + F/R2) output relays closed at 2nd speed. See Section 4.2.3.1 on page 29 on how to set to this function.

   ![Diagram of relay actions]

#### 4.2.2.3 START + AUX Function

After executing the START command at transmitter startup the same START position becomes an auxiliary function with momentary contact connected through the K10 Function output relay. There are other types of auxiliary functions made available for the K10 Function output relays (see Section 4.2.5 on page 32). Contact Magnetek field service if your application requires other types of auxiliary functions connected to the Function output relay.
4.2.2.4 ON/OFF Pushbutton Function

The user can set any of the two adjacent pushbuttons on the transmitter to behave like a mechanical ON and OFF rocker or toggle switch. The ON output relay closes when the ON pushbutton is pressed (the OFF output relay opens) and the OFF output relay closes when the OFF pushbutton is pressed (the ON output relay opens). See Section 4.2.3.1 on page 29 on how to set to this function.

4.2.2.5 Brake Function

When the transmitter pushbutton is released from 2nd speed up to 1st speed, both 1st and 2nd speed output relays will open for up to 1 second and then with 1st speed output relay closed thereafter. See Section 4.2.3.1 on page 29 on how to set to this function.

4.2.2.6 External Warning Function

The user can install an external warning device (rotating lights, horn, etc.) to the K10 Function output relay located inside the receiver. The user can choose which pushbutton pair (or pairs) triggers the external warning device when pressed. See Section 4.2.3.1 on page 29 on how to set to this function.

4.2.2.7 Momentary Contact

When the pushbutton is released the corresponding output relay will open or deactivate. This type of relay action usually applies to external applications such as the horn and buzzer. See Section 4.2.3.2 on page 30 on how to set to this function.

4.2.2.8 Toggled Contact

When the pushbutton is released the corresponding output relay will maintain contact or closure until the user presses the same pushbutton again. This type of relay action usually applies to external applications such as lights. See Section 4.2.3.2 on page 30 on how to set to this function.
4.2.2.9 Receiver Channel Scanning Function

Receiver channel scanning function is applicable only when a preset channel is assigned to the system (see Section 4.1.2 on page 18, part B).

1. \(00\) manufacturer preset (channel X)*
   - S3 DIP 7-8

2. \(01\) scans 2 channels (channel X and channel X+1)
   - S3 DIP 7-8

3. \(10\) scans 3 channels (channel X… channel X+2)
   - S3 DIP 7-8

4. \(11\) scans 4 channels (channel X… channel X+3)**
   - S3 DIP 7-8

* Channel X → channel set on the Channel dipswitch.
** Contact ARC representative if your application requires scanning more than 4 channels.

Example: If the first 6 dipswitch positions are set to channel 01 (000001), when set to 2-channel scanning (type 2 above) the receiver will scan only channel 01 and 02.
### 4.2.3 Dipswitch Settings

#### 4.2.3.1 Interlocked Pushbutton Pair

Interlocked means any pushbutton pair cannot be pressed simultaneously as each press will cancel the other out. Interlocked setting usually applies to electric motor’s forward and reverse motion and ON and OFF switches. Each dipswitch on the decoder board corresponds to a pushbutton pair.

**4EX2:**

* External warning function requires installing an external warning device such as horn or lights to the K10 Function output relay.
4.2.3.2 Non-Interlocked Pushbutton Pair

Non-interlocked setting allows the pushbutton pair to be pressed simultaneously. It usually applies to equipment’s auxiliary functions such as lights, horn or buzzer. Five dip positions correspond to a pushbutton pair.

4.2.5 Other Function Output Relays Settings

Listed below are other types of functions that can be outputted through the K10 Function output relay via the infrared IR programmer unit. Contact Magnetek field service for more details.

LV → Function relay closes when receiver voltage is low.

ID → Function relay works simultaneously with all motion commands.

NORMAL → START function + AUX with normal momentary output.

TOGGLE → START function + AUX with toggled/latching output.

TOG&E → START function + AUX with toggled/latching output affected by the STOP command (Function relay opens when STOP button is pressed down).

S/P → Function relay closes when START command is executed and opens only when transmitter power is turned off.

EXT → Function relay works simultaneously with the receiver MAIN relays.

HORN → Function relay closes for up to 3 seconds when START command is executed at transmitter power on and then becomes a normal momentary output thereafter.

G SENSOR → Function relay closes when Zero-G sensor is triggered (receiver MAIN relays deactivated) and opens when receiver MAIN relays are reactivated.

**NOTE:** Channel unassigned is represented by “000000” dipswitch setting. See Section 4.1.2 on page 18, part A, unassigned channel scheme.
5 Receiver Installation

5.1 Output Relay Contact Diagrams

5.1.1 Flex 4EX2 (dual speed model)

* For 9-36VDC power supply, wire #1 corresponds to the negative charge (-) and wire #3 corresponds to the positive charge (+). Wire #2 is for GROUND.

5.1.2 Flex 6EX2 (dual speed model)

* For 9-36VDC power supply, wire #1 corresponds to the negative charge (-) and wire #3 corresponds to the positive charge (+). Wire #2 is for GROUND.
5.2 Pre-installation Precautions

1. Make sure the transmitter and receiver have the same serial numbers and are set to the same channel.
2. Make sure the receiver is not set to the same channel as any other systems in use in the surrounding area.
3. Make sure the crane or equipment is working properly prior to installation.
4. Make sure the power source to the receiver is set correctly.
5. Switch off the main power source to the crane or equipment prior to installation.
5.3 Step-by-Step Installation

With Optional Removable Mounting Bracket
1. For best reception the location of the receiver should be visible to the operator at all times.

2. The location selected should not be exposed to high levels of electric noise. Mounting the receiver next to an unshielded variable frequency drive may cause radio interference. Always locate the receiver as far away from variable frequency drive and electric motor as possible.

3. Ensure the selected location has adequate space to accommodate the receiver. If an external antenna is used, to avoid the possibility of antenna damage always locate the receiver where the antenna is free from any obstacles.

4. When installing an external antenna make sure the MCX jack located on the RF/decoder board inside the receiver is connected and jumper set to “EXT” position.

5. For better reception, make sure the receiver is in an upright position.

6. Drill four holes on the control panel, wall or location where the receiver is to be installed.

7. Make sure the screws are tightened after installation.
With Optional Removable Mounting Bracket

1. Drill two holes on the control panel, wall or location where the receiver is to be installed.

2. Slide down the receiver along the guided track to secure the receiver to the mounting bracket.

3. Remove the receiver by pressing down the bracket release and pull the receiver upward until it clears the guided track.

Install

Remove
6 Operating Procedures

6.1 General Operation

1. Reset the STOP button located on the top left hand corner of the transmitter by rotating it clockwise or counterclockwise; the button will pop up. Turn on the transmitter power by inserting the power switch key and rotating to ON (I) position.

2. After turning on the transmitter power, check the Status LED on the transmitter for any sign of system irregularities (see Section 6.4.1 Transmitter Status Indications on page 41). If the transmitter is in good working order the Status LED will display solid green for up to 2 seconds at power on (no faults detected).

3. Rotate the power switch key further to the START position and hold it there for up to 2 seconds (Status LED solid green). When the receiver MAIN relays are activated the Status LED will change from solid green to solid orange (system on). The power switch key will retract back to the ON (I) position when released (Status LED blinks green). The same START position becomes an auxiliary function thereafter (see Section 4.2.2.3 START + AUX Function on page 26). Press any pushbutton on the transmitter to begin operation. Pressing any pushbutton before executing the START command at system startup will result in no signals transmitted (Status LED blinks orange).

4. In case of an emergency, press down the STOP button to disconnect the receiver MAIN relays and the transmitter power. To resume operation, rotate the STOP button clockwise or counterclockwise; the button will pop up. Then rotate the power switch key to the START position for up to 2 seconds to reconnect the receiver MAIN relays. For safety, executing the START command is required every time the transmitter is turned on or after every STOP button reset.

5. After 1 or 5 minutes of inactivity (pushbutton not pressed) the receiver MAIN relays are temporarily disconnected (see Section 4.1.5 Transmitter Inactivity Timer Settings on page 22). Press any pushbutton or execute the START command to resume operation (see Section 4.1.4 Transmitter Start Function Settings on page 21). The receiver MAIN relays are also temporarily disconnected when the system encounters strong radio interference, dead spots, low battery condition, and system out of operating range.

6. Turn off the transmitter power by rotating the power switch key counterclockwise to the OFF (O) position; it will disconnect the transmitter power and the receiver MAIN relays altogether. Turn it further counterclockwise to release the key.
6.2 Changing Batteries

Change transmitter batteries ("AA" alkaline battery x 2) by unscrewing the battery cover located on the backside of the transmitter. During battery installation make sure the batteries are installed correctly, with "+" to "+" charge and "-" to "-" charge. Also make sure the screw is tightened after battery installation to avoid water, moisture, dirt, grease, and other liquid penetration.

6.3 Battery Charging

The transmitter is designed to accept any off-the-shelf NiMH rechargeable batteries. When charging both transmitter and individual batteries at the same time the priority always goes to the transmitter charging. The individual battery charging begins only after the transmitter charging is completed. Depending on the battery capacity the average charging time is approximately 3 hours from completely drained to fully charged. Solid red on the LED represents charging in progress, solid green represents batteries fully charged, and LED off represents no batteries detected. Do not use any rechargeable lithium ion batteries as they will damage both the transmitter and the charging station. Refer to the charging station instruction manual for other useful features such as the rubber safety belt, removable mounting bracket and external light indication.
### 6.4 System Status Light Indications

#### 6.4.1 Transmitter Status Indications

8 Declaration of Conformity

EU Declaration of Conformity (EMC, R&TTE, SAFETY & MACHINERY)

For the following equipment:

Product : Flex EX Series Radio Remote Control System
Multiple Listee Model No. : Flex 4ES/EX2, 6ES/EX2, 8ES/EX2 and 12ES/EX2
Manufacturer's Name : Advanced Radiotech Corporation
Manufacturer's Address : No.3, South 1st Road, Chien Chen District,
                       Kaohsiung, Taiwan

We hereby declare, that all major safety requirements, concerning the CE Mark Directive 2006/42/EC, Low Voltage (LVD) Directive 2014/35/EU, Electromagnetic Compatibility (EMC) Directives 2014/30/EU and RE Directive of 2014/53/EU are fulfilled, as laid out in the guideline set down by the member states of the EEC Commission.

The standards relevant for the evaluation of the electrical safety requirements are as follow:

EMC : EN 301 489-1 V2.2.1 + EN 301 489-3 V2.2.1
R&TTE : EN 300 220-1 V2.4.1 + EN 300 220-2 V2.4.1
SAFETY : EN 60950:2006+A1+A11+A12
OTHERS : EN 60529 (IP66), EN 62479, EN 55032 + EN 55024

Test reports issued by:

EMC : SGS
R&TTE : SGS
SAFETY : SGS
MACHINERY : SGS
OTHERS : SGS
